Security perforated plate fluid enhancement gaskets can provide filtration for removing particles and other suspended solids from fluids. Perforated plate gaskets provide a constant removal of particles, contaminants and other unwanted product pollutants. They are used as in-line filters and strainers.

Also, **Security** Perforated Plate Fluid Enhancement Gaskets help to archive pump safety and act as a defense against unwanted particles that cause damage. **CGS™** perforated plate gaskets are designed to be exchangeable with many of the sanitary gaskets. They are Used in the food, beverage, dairy, pharmaceutical and biotech sanitary process industries. These are available in sanitary **Tri-Clamp®**, with FDA USP Class VI materials. In addition, these gaskets come in a wide range of perforation sizes
